Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,101,166. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Referring to claim 1, claim 1 of U.S. Patent No.: 6,101,166 teaches: A hub port which detects loop failure initialization which means that the hub port has a error detecting portion. The hub port receives the loop failure initialization from a faulty node. The hub port is connected in a loop and bypasses the faulty node upon receiving the loop failure initialization.

Claim 1 of U.S. Patent No.: 6,101,166 does not expressly call for: a plurality of hub ports or loop initialization detect primitive (L8) but teaches a plurality of node ports and loop failure initialization detect.

It is within the level of one skilled in the art to implement a plurality of hub ports in order to support a plurality of node ports and to implement the loop initialization as a software primitive which the implementer decided to name LIP 8.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2661

DeFoster et. al.; US Patent No.: 5,754,549 dated 5/19/98 in which he discloses a loop initialization primitive upon initialization of a loop but does not teach utilization of the primitive upon detection of a failure.
